Automation

By identifying each cow and accurately monitoring rumination, eating, heat detection and more, AfiCollar delivers key metrics on each cow, empowering dairies to make individualized, proactive decisions for herds of any size.

AfiCollar in Action

When cows stray from their patterns, AfiCollar sends an alert with the possible cause for timely intervention on an individual and group level.

“ Our heat detection rate went way up. When you can increase that 10 to 15%... you’re getting more animals pregnant. ”

Kaleb Whitby
Lash Legacy Dairy

NOW I KNOW

WEARABLE TECHNOLOGY DRIVES PROFITABLE DECISIONS

AfiCollar helps dairies save time, improve herd health and boost revenue with 24/7 monitoring. Data is analyzed in the AfiFarm Herd Management Software suite of products, giving you the power to view, sort and manage cows from anywhere.

Maximize Productivity

Find and treat sick cows sooner to maintain productivity and lower treatment costs

Better Breeding

Accurate heat detection ensures timely insemination for improved pregnancy rates

Labor Savings

Simplify tasks, streamline training, and put employees where they're needed most

Improved Cow Comfort

Minimize interventions to let cows be cows, eliminate headlocks, and reduce heat stress

“AfiCollar speaks
for the cows.”
