

ENHANCE HERD HEALTH, BOOST REPRODUCTION

World's First & Leading Leg Tag for Cow Monitoring

Top Heat
Detection

AfiAct III leg tags monitor cow health and activity to deliver insights that help boost reproduction, optimize welfare and detect diseases earlier.

AfiAct III in Action

AfiAct III calving alerts are sent to your smartphone at the start of calving, and when prolonged calving occurs, to increase intervention effectiveness and help reduce mortality rates.

Welfare

Calving
Alerts

“ With AfiAct III...
“my vet calls it
pregnancy
confirmation
day. ”

Rudy DeWinkle
Solid Rock Ranch

NOW I KNOW

DRIVE PROFITABLE DECISIONS

AfiAct III delivers reliable activity monitoring that helps you understand each cow's status. Detect movement patterns that may indicate she's ready to calve or find abnormal behavior that could signal a health issue.

Data is interpreted in AfiFarm to help you:

Make Informed Breeding Decisions

Accurate heat detection ensures timely insemination for improved pregnancy rates, while calving alerts help reduce mortality rates.

Maximize Productivity

Support herd health and well-being by finding and treating sick cows sooner to maintain maximum productivity and lower treatment costs.

Streamline Employee Management

Simplify tasks and employee training to save money and put employees to be where they're needed most.

“When we put the cows in the free stalls your breeding would suffer because they didn't want to ride. AfiAct picks up those cows even though they're not showing that much.”

Gary Van Dyk
Snake River Holsteins
