Early
Disease
Detection

Only Afimilk's in-line milk lab provides a daily record of milk yield and milk components per cow, providing the insight you need to improve profitability.

Detect Issues Sooner

AfiLab will improve outcomes and dramatically change the way you manage treatments with feed monitoring, selection planning and early detection on:

- Ketosis
- Mastitis
- Blood
- Sub-Acute Ruminal Acidosis (SARA)

“ With AfiLab now, we can pick out our top genetics and we can breed those ever better now. It's been super cool to stay ahead of the curve. ”

Justin Reece
Moo-Riah Dairy

NOW I KNOW

GET PAID MORE FOR YOUR MILK

The AfiLab inline milk component analyzer measures fat, protein and lactose from every cow at every milking giving dairies the power to tap into the full value of their milk.

Monitor

Find your highest producers with the best quality milk to help make informed, long-term decisions on breeding, culling, milking, and feeding.

Detect

Identify health issues early (ketosis, mastitis, SARA, infections), often in the sub-clinical stage, to implement health and nutritional interventions before a marked impact is made on the cow.

React

Make responsive least cost/greatest benefit ration decisions to increase the value of milk based on components while also maximizing feed efficiency, which will lower feed costs.

“ It has really helped our farm go that extra mile to really tap into all of our potential. ”

Ashley Risner
Loehmer Dairy
